Peace Corps Policy

Complete X to Unlock

Medication & Labels

Mission

- + Introduce the anti-malaria medications (prophylaxis) options
- + Identify potential side effects
- + Inform the conversation between you and your Peace Corps Medical Officer

Begin Stage

Activity

Meet the Meds....

Mefloquine

AKA "Uncle Mef"

Not everyone gets his jokes, and some people get upset stomach, dizziness and rarely, neuropsychiatric effects. He generates a lot of family gossip and innuendos, but in fact most people can tolerate him just fine.

Malarone

AKA "Princess Mal"

She's rich, pretty and has expensive taste. She demands you dine with her every day, and while you want to hate her and her high maintenance ways, she's genuinely nice.

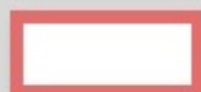

Doxycycline

AKA "Mama Doxy"

Momma Doxy is the nagging mom we all know and love. She's in your business every day, she demands that you use sunblock, and sometimes she bugs you until your stomach gets queasy. But, she wants to solve all your problems - not just malaria.

Got it.

...Match the Meds

Mefloquine

Malarone

Doxycycline

Draw a line from each medication to the matching description

Taken every week, may cause upset stomach, dizziness, nausea, headache, vivid dreams, neuropsychiatric side effects.

Antibiotic taken every day, may cause sensitivity to sunlight, and upset stomach.

Taken once every day, may cause nausea, vomiting, stomach pain, headache, diarrhea.
